

Every Business has Unique Needs and Varying Pain Points on What Data Matters Most.

ConnectWise Recover provides a foundation that is adaptable to what protection and recovery options best fit your client no matter what the budget. Whether sustaining the confidence and control of on premises to modernizing for cloud, and hybrid on a per-machine basis—ConnectWise Recover provides the means to safeguard critical business data and restore business operations at hyper speed.

"Data integrity is critical for our customers so our backups have to be rock solid, but our engineers were spending a lot of time monitoring and fixing backups that weren't working properly. Having ConnectWise take care of that for us helps us take care of our customers, while freeing a MySherpa resource for higher-value work."

—ETHAN TANCREDI,
President, MySherpa

Key Benefits

Lower total cost of ownership

Amplify margins and service efficiency by removing your team from the day-to-day management and refocus resource energy to high impact projects.

Strengthen customer trust and deliver peace of mind

Build customer confidence knowing data is protected and can quickly be recovered with industry leading technologies.

Assurance that recover points will successfully virtualize

Ensure critical backup integrity so systems can be restored when needed most.

More options with easier deployment

Provide backup and disaster recovery options designed for businesses of every size with Continuous Data Protection™ technology, secure and reliable cloud storage options, and 24/7 Continuum NOC support.

Meet or exceed each clients' recovery point/time objectives

Magnify customer satisfaction knowing you can deliver on recovery point requirements no matter what type of environment.

ConnectWise Recover Continuity & Backup

How We Do It Better

Single-Source for Data Protection

Flexible Deployment Options Across Local, Cloud, or Hybrid

Continually Improved Software and Service Innovation

Backed by BDR Experts in our NOC

Key Features

Advanced data verification

Tru-Verify™, an advanced proprietary verification process that provides recovery-point-integrity checks coupled with a time-lapse video of entire boot processes for maximum visibility, faster issue resolution and performance assurance when needed most.

Continuous data protection

Block-level backup for efficient storage and superior resource utilization, minimizing wear-and-tear and maximizing data availability.

Secure and reliable cloud infrastructure

ConnectWise Cloud, powered by IBM Cloud®, is built with advanced cloud security with 24/7 DDoS prevention and automatic data replication between datacenters.

Ransomware-resistant solution

Ransomware is a constant threat across all stored data. Block level AES-265 level encryption to protect and secure data at rest, in transit, and in the cloud.

Instant virtualization + recovery

Recovery is measured in minutes—not hours or days—meaning minimal downtime for clients.

Expert management

ConnectWise Assist's certified NOC technicians handle the day-to-day management, monitoring and troubleshooting of backups so you don't have to.

ConnectWise Assist – Elite Service

ConnectWise Recover™, formerly a Continuum solution, delivers efficient and adaptable backup and disaster recovery (BDR) options for technology solution providers (TSPs). Protect against data loss due to natural disaster, ransomware, human error, and more with expert NOC support for cloud, hybrid, or on-premise backup options. Advanced automation and verification systems and block-level storage keep data secure and available when TSPs need it to get their clients up and running faster.
