Continuum Fortify For Protection

PRODUCT DETAILS

Continuum Fortify for Protection provides information to help you determine the most efficient security strategy for your clients.

Before deploying random security tools, you need to understand what your client needs. Continuum Fortify for Protection scans SMB environments to identify security gaps and provide information to help you determine the most efficient security strategy for each client. The solution combines intelligent profiling and alerting technology with support from our Security Operations Center (SOC), which empowers MSPs to build and enforce end-to-end security policies for their clients.

With advanced profiling, risk scoring and identification of gaps in coverage, MSPs can quickly shine a light on defining policies for their clients.

TYNESO

ENGAGING WORKPLACES

"Continuum helped us develop a better security business than we could have built ourselves. Instead of having to assemble our own offering, everything we need is in the portal. That means Continuum partners can go to market tomorrow instead of six months from now."

Steve Tygat
Founder, Tyneso, Benelux

Key benefits

Address security gaps based on best practices
No two customers are the same but your approach to build out a security program to meet their needs should be based on known, proven best practices that can scale to meet the needs of their business.

Be alert ready vs alert fatigued
The right security that is always on watch, filters out the noise and informs customers on only the alerts that need to be actioned. This allows your customers to focus more energies on growing their business vs chasing ghosts in the machine.

Security and compliance as a growth driver
Being Compliant has moved beyond a checkbox and is now something that drives business. When implemented right, SMBs can realize that achieving compliance is not a burden but an opportunity.

Continuum Fortify For Protection

How we do it better

Endpoint and user account reporting

Compliance technical requirements made easy

Clear insight into security gaps

Smarter alerts, fewer tickets

Key features

Monitoring and analysis
Monitor key log files to identify and correlate events that could be malicious, while providing additional security and adherence to regulatory guidelines. *Please check with your account manager or sales representative for the list of supported devices.*

Customized security profiles
Reduce the data noise and focus on what really matters to identify technical gaps in your customer's environment, helping you to take action on what's needed to prevent an attack.

Risk scoring and alert thresholds
The risk score helps you identify protection gaps and how they impact the device's vulnerability to threats you're trying to protect against. You can then customize alert thresholds to articulate acceptable risk on a per-device basis, and tickets are only generated when a risk score exceeds its threshold, eliminating much of the clutter and white noise found in other solutions.

Advanced Reporting for Compliance
Guidance through regulation technical requirements, exposing security configuration gaps against policies and providing solutions to address each issue.

Webroot Secure Anywhere® DNS Protection
Equip your end-client environment with this advanced DNS protection. Featuring more than 80 URL categories, it provides greater visibility over endpoint connections, reduces risk and tailor's usage policies for each SMB's unique needs.

Webroot® Security Awareness Training
Comprehensive training courses designed to educate your customers about security threats and how to avoid them on an ongoing basis.

Continuum Fortify
Cybersecurity

For Assessment and Assessment Plus

For Protection

For Endpoint Security

For Network Security

Continuum Fortify enables MSPs to deliver end-to end security services without building and maintaining in-house operations. With Continuum Fortify you can design and implement custom security solutions at every client site, with coverage of advanced alerting, SOC and SIEM services.

The Continuum Ecosystem
